Plant Milkweed for Monarchs

Monarchs cannot survive without milkweed plants. Milkweed provides a home and essential food for monarch caterpillars. You are in a position to help: Please plant milkweed for monarchs!

Monarch numbers are declining, partly due to the loss of necessary milkweed habitat. By planting milkweed and other native wildflowers, you can help to preserve this beauti- ful butterfly and its epic migration. Every single plant has the potential to feed a monarch, and make a difference.

Milkweed flowers make a colorful splash in gardens, meadows and other habitats—and they will lure even more color to your garden with the many different kinds of butterflies that they attract. Visit www.plantmilkweed.org to learn what milkweed species to plant in your region, and where you can find milkweed seeds or plants for your garden or other habitats.
